

WisdomForce Announces Availability of DatabaseSync Version 2 to real-time sync transactions for more database and data warehouse vendors

WisdomForce Database Sync System 2.0 extends abilities of customers to efficiently capture most recent transactional changes in near real-time. The large volumes of transactions synchronized in heterogeneous environment between production OLTP systems and data warehouses in short time with ultra-high performance. Database Sync 2 arrives and delivers high-performance real-time transactional change data capture, log-based database replication and data warehouse feed from very large databases.

Seattle, WA – September 01, 2008 - WisdomForce™ Technologies, Inc., a leading provider of high-performance data movement and integration solutions, today announced general availability of WisdomForce Database Sync 2.0, a comprehensive transactional data movement solution, which is designed to meet the needs of enterprise-wide, mission-critical systems that use multi-vendor enterprise databases in heterogeneous environment.

New main features include:

- Larger database and data warehouse vendors coverage. Oracle, Teradata, Netezza, DB2, SQL Server, PostgreSQL, Greenplum, MySQL and Sybase are well supported as a target.
- Added transaction audit capabilities and metadata management.
- Significant enhancements of DatabaseSync Manager (GUI).
- Significant performance improvements.
