

WisdomForce Announces Availability of FastReader Version 6.0

Version 6.0 brings tight integration between WisdomForce products and streaming capabilities. The new version enhances transformation on the fly while preserving high performance and low system resources usage

Seattle, WA – March 12, 2010 - WisdomForce™ Technologies, Inc., a leading provider of high-performance data integration, real-time replication and data warehouse movement solutions, today announced general availability of FastReader™ 6.0, a comprehensive solution for automating and managing high-speed database data transfers between large, multi-vendor enterprise databases in a heterogeneous environment.

New main features include:

- **Integration with WisdomForce DatabaseSync** - High performance real-time Change Data Capture, database replication and data warehouse feed from very large databases. FastReader can be configured for Initial Synchronization in order to scale on multi-terabytes data movements.
- **DataStreamer for Teradata.** [DataStreamer for Teradata](#) is an optional add-on for FastReader introduced in version 6. DataStreamer is performing Direct Path Extract with high-performance and at the same time streaming the extracted data in parallel to available Teradata amps bypassing file system. No writes to intermediate output files or pipe are required when DataStreamer is enabled as the data is streaming directly from Oracle into Teradata while performing the necessary data transformations, to make sure the data from Oracle fits into Teradata. DataStreamer is also integrated with WisdomForce DatabaseSync for high-performance Initial Synchronization required for ongoing replication of data changes from Oracle into Teradata
- **Significant enhancements of FastReader Manager (GUI).**
- **Enhanced data transformation on the fly**

About WisdomForce FastReader

The WisdomForce™ FastReader™ is a next generation high-performance data transfer and migration solution used in critical day and night IT operations. FastReader can transfer, migrate and integrate data from any or all Oracle tables of any size (terabytes of data) into portable flat text files (or into a fifo pipe) in a fraction of the usual time without compromising the performance of production database systems. Extracted data is in portable ASCII format and can be transferred or migrated to any datasource without additional effort. FastReader™ works with major databases, including Oracle, DB2, MSSQL, MySQL, Sybase, Netezza, Teradata, PostgreSQL and supports most operating systems and platforms such as Solaris, HPUX, AIX, Tru64, Windows and Linux. The high-speed data unload / load process using FastReader can significantly reduce time constraints, storage needs and network overhead.

About WisdomForce

WisdomForce solutions make enterprise data universally and securely up to date accessible and useful. WisdomForce Technologies delivers software products that help CIOs of data-intensive businesses and governmental entities to improve the quality, availability and continuity of the data within their IT systems, leading to better business decision-making, increased productivity, and an improved bottom line. WisdomForce's high-performance products focused on the real-time database data movement and data integration market.

WisdomForce is providing customers with software for real time data integration, replication, extract, change data capture, transformation, movement and management of data from one/many database to one/many database.

WisdomForce's customers include Wal-Mart, Coca Cola, Verizon, and Motorola, US Department of Labor, Thomson Financial, Verisign and Ross Stores among others. WisdomForce's leadership in the market is based on customer adoption, innovation, vision and product superiority in real-world customer situations. WisdomForce is based in Seattle, Washington.
