

DataStreamer for Teradata

powered by **FastReader™**

- ⇒ Direct path unload with FastReader with data being read directly from Oracle data files
- ⇒ Extracted data is immediately pumped into **Teradata** load utility, no write operation on disk or storage performed, including write to the file or pipe
- ⇒ Parallel extract and parallel load enables high data throughput
- ⇒ DataStreamer is integrated with WisdomForce DatabaseSync enabling direct, log based change data capture - CDC
- ⇒ Runs on all enterprise Unix, Windows and Linux platforms
- ⇒ Support all common data types including Long, LOB/CLOB, compressed tables direct path extract
- ⇒ The data is extracted and loaded using **Teradata** binary format, reducing parsing load on the destination
- ⇒ WisdomForce DataStreamer automatically performs all necessary field conversions and truncation assuring correct load onto **Teradata**
- ⇒ Uses **Teradata** TPT libraries Load and Stream drivers.

High-Performance automatic data streaming from Oracle into **Teradata**

High speed Direct Path Extract performed by FastReader engine
Automatic and immediate data transfer into **Teradata** using TPT
Integration with WisdomForce CDC DBSync
