

DataStreamer for Teradata

powered by **FastReader™**

- ⇒ Direct path unload with FastReader when data read directly from data files
- ⇒ Extracted data is immediately pumped into **Teradata** load utility, no write operation on disk or storage performed, including write to the file or pipe
- ⇒ Parallel extract and parallel load enables large data transfer throughput
- ⇒ DataStreamer integrated with WisdomForce DatabaseSync enabling direct and log based change data capture - CDC
- ⇒ Runs on all enterprise Unix, Windows and Linux platforms
- ⇒ Support all common data types including Long, LOB/CLOB, Compression tables direct support
- ⇒ The data is extracted and loaded in **Teradata** binary format
- ⇒ WisdomForce DataStreamer performs all necessary and automatic data conversion assuring correct load onto **Teradata**
- ⇒ Integrated with **Teradata** TPT load utilities FastLoad, MultiLoad and Parallel Data Pump

High-Performance automatic data streaming from Oracle into **Teradata**

High speed Direct Path Extract performed by FastReader engine
Automatic and immediate data pump into Teradata
Integration with Teradata TPT and WisdomForce CDC DBSync
